Education

Vellore Institute of Technology **2022 - 2026**
B.Tech in Computer Science Engineering, CGPA: 8.70/10

Skills

- **Languages & Web Technologies:** Python, Java, JavaScript, SQL, HTML5, CSS3, React.js, Node.js
- **Backend & Databases:** MongoDB, Mongoose, MySQL, RESTful APIs
- **Core CS and Tools:** OOP, DSA, OS, CN, DBMS, SDLC, Git, Agile, Cloud Deployment (AWS)
- **Applied AI & Integrations**: LLM APIs, Model Integration, Data Processing, Data Manipulations

Projects

Nexus – Real-Time Multimodal Application GitHub

- Developed a real-time multimodal healthcare application that processes patient images and voice inputs to generate AI-driven responses in both text and audio, achieving sub-2s end-to-end latency.
- Owned the design of a modular, API-based backend in Python integrating image processing, speech-to-text, LLM inference, and text-to-speech, reducing feature integration time by ~35%.
- Prepared a scalable, user-facing web interface with Gradio supporting image uploads and live voice interaction, handling 100+ concurrent test requests with stable performance.

SHOPEZ – MERN Stack E Commerce application GitHub

- Built a full-stack platform with authentication, product CRUD, and cart features, enhancing user experience with modular APIs and reusable React components.
- Optimized RESTful APIs for 280–300ms response times, reducing page load by 25% and improving transaction flow for seamless shopping.
- Simulated payment gateway and used Miro/Mural for workflow visualization and team alignment, ensuring scalability and smooth future feature integration.

Tara – AI Virtual Assistant GitHub

- Designed a multilingual, JARVIS-like AI voice assistant (MERN) that helps with day-to-day tasks, offering full personalization with voice selection and image uploads.
- Integrated Web Speech API with RESTful backend services to orchestrate speech input and AI inference, achieving 85%+ recognition accuracy and reducing response latency by ~290ms.
- Refined backend performance by ~30% through async routing and payload reduction, with automated CI/CD pipelines to support scalable production workloads.

Experience

MERN Full Stack Developer trainee – Smartbridge

- Engineered scalable MERN applications with secure REST APIs and enhanced MongoDB-backed Node.js services, improving API performance by ~35%.
- Designed and validated 4+ REST APIs (auth, inventory, cart, orders) with JWT-based role-level access control across 10+ edge-case scenarios, strengthening backend security.
- Benchmarked API performance with 100+ simulated request cycles, identifying bottlenecks and driving iterative optimizations to improve request handling and system stability.

Certifications

- **Databases for Developers – Oracle:** Designed normalized schemas and optimized SQL queries using MySQL and PostgreSQL with indexing and joins.
- **MongoDB Node.js Developer Path – MongoDB:** Built scalable backend features using MongoDB with CRUD operations, indexing, and aggregation pipelines in Node.js.

Leadership & Achievements

- **Flipkart Grid 7.0 National Semi-Finalist**, **Smart India Hackathon 2024** Internal Round qualifier.
- Built civic-tech traffic analytics solution with **Delhi & Dehradun Police**;
- Conducted 5+ technical workshops with 500+ attendees, increasing engagement by 40%.
